VidiCore

Smart Media Management for Modern Workflows

What is VidiCore?

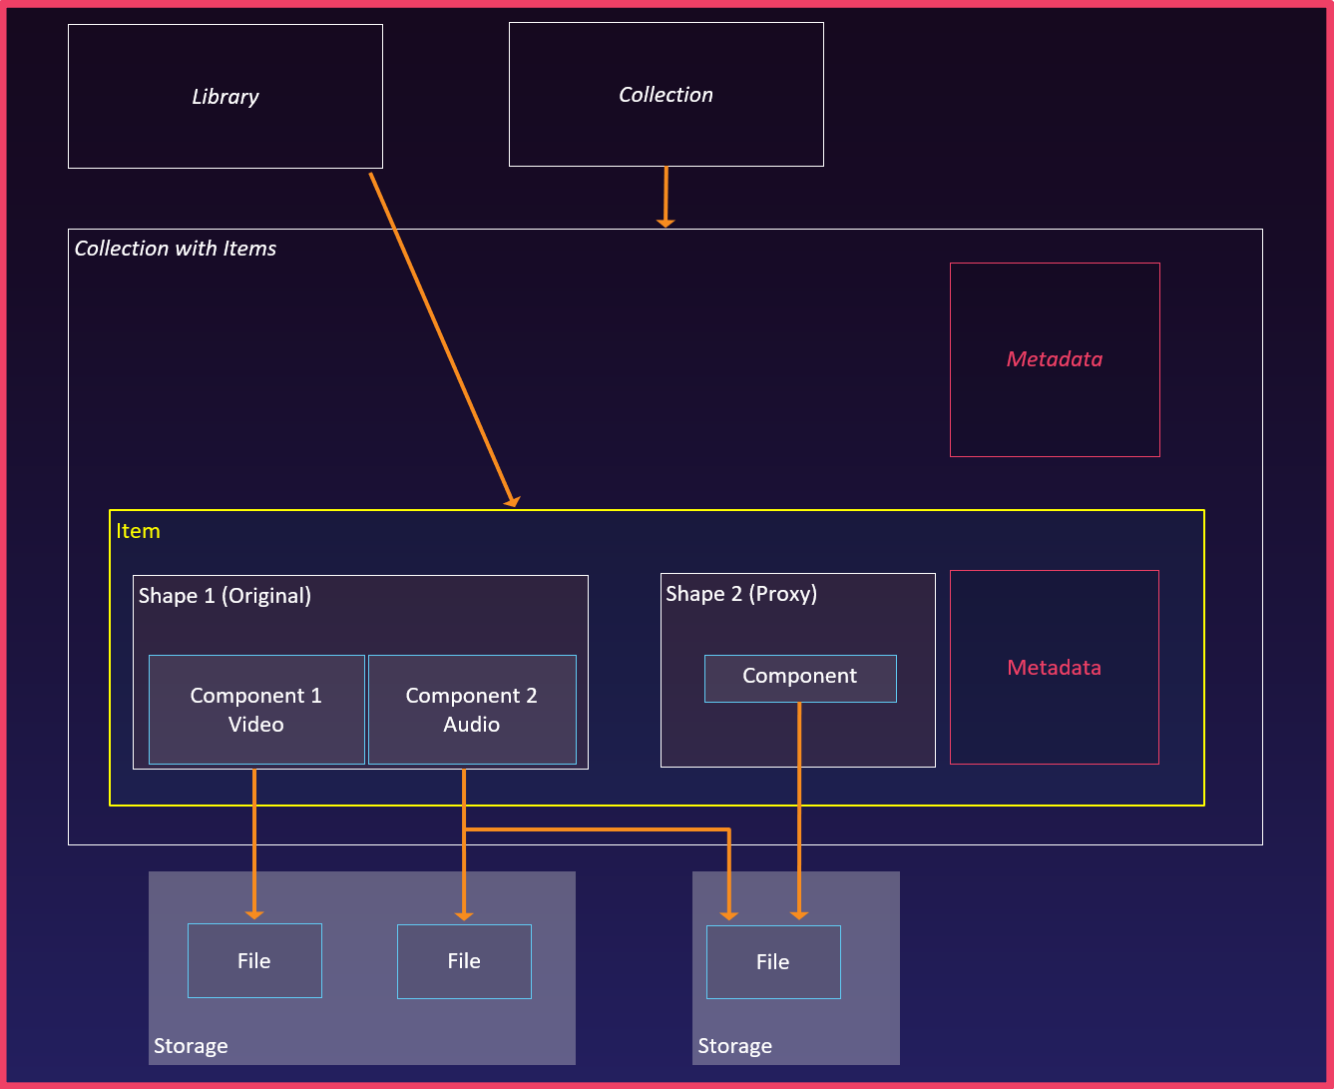

VidiCore is the powerful, cloud-native media management backbone at the heart of every VidiNet solution; Chosen by leading media and entertainment brands and trusted by OEM partners worldwide. It is both a robust media repository and a highly scalable backend for managing, organizing, indexing, and transforming media assets into distributable content across multiple platforms and workflows.

Built with flexibility in mind, VidiCore can be deployed on-premise, in the cloud, in hybrid setups, or as a fully managed SaaS solution. It underpins not only custom “build-your-own” workflows but also every tailored media solution that Vidispine delivers to customers.

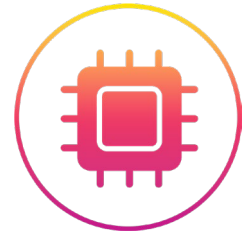

At its core is the VidiCore REST API — the same API used internally by Vidispine for all products — and fully available to partners and customers. This API-first design makes VidiCore easy to integrate, extend, and customize using common tools and programming languages.

With its flexible metadata model, powerful indexing, and built-in transcoding and job execution, VidiCore reduces workflow complexity and ensures your assets are always production-ready. Combined with Vidispine’s central configuration hub, it gives administrators full control and quick adaptability to changing business needs.

Why choose VidiCore?

Many media management solutions lock you into rigid, monolithic platforms — but VidiCore takes a different approach. Built with decades of experience in the media and broadcast industry, VidiCore combines feature richness with unmatched flexibility, making it capable of handling the most complex enterprise workflows. Its API-first, modular architecture lets you integrate only the components you need, connect seamlessly with existing tools, and scale as your business grows — all without vendor lock-in. This approach reduces total cost of ownership, accelerates deployment, and future-proofs your workflows, giving you the freedom to adopt new technologies and adapt quickly as market demands evolve.

Benefits with VidiCore

- **Flexible Deployment:** On-premise, cloud, hybrid, or fully managed SaaS.
- **Advanced Metadata:** Ingest, extract, validate, and search assets with ease.
- **Smart Storage:** Local, network, and cloud storage with automated file management.
- **Secure Access:** Role-based permissions and user management for safe collaboration.
- **Easy Export & Sharing:** Deliver content seamlessly across platforms and workflows.
- **Real-Time Insights:** Notifications, metrics, and monitoring for full visibility.
- **Powerful Integrations:** Connect with transcoding, QC, AI, and custom workflows.
- **Customizable & Extensible:** Modular, API-first design to fit any production need.
